

Huffman

Image Optimisation Service using Rust

github.com/chroniclehq/huffman

4mb 📄 2.2mb | <https://unsplash.com/photos/umRPY9w3q1c> 🖼️

If you open this deck on beta.chroniclehq.com you'll be downloading ~203mb in images alone 📉.

On preprod.chroniclehq.com though, you'll only be downloading ~24mb 📈.

Too tired to calculate how much of a percentage decrease that is, but we think it's huge 🤪

David A. Huffman

An American pioneer in [computer science](#), known for his [Huffman coding](#). A Huffman code is a particular type of optimal prefix code that is commonly used for lossless data compression.

Optimises creepy high-res images
